(54) SELF-BALANCER

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a self-balancer which can implement the self-aligning effect not only to the eccentric load in the horizontal plane but also to the eccentric load in the axial direction.

SOLUTION: The self-balancer comprises a case 41 mounted on a rotary portion of a motor 1 forming a drive source of a rotating body and a plurality of balancer members 45 disposed in a passage 42 formed inside the case 41, and the inclination of the rotary body can be suppressed by moving the plurality of balancer members 45 in the passage 42 in the axial direction and the circumferential direction when the rotational frequency is not less than the resonance frequency.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's

[decision of rejection]

[Date of extinction of right]
